

Supplier sourcing and supply coordination

RBW Trade services and approach

rbw-trade.com/en/

Four areas of work

01 **Supplier sourcing**

Agree requirements and compare potential manufacturers.

02 **Manufacturer verification**

Arrange verification against questions and criteria for the project.

03 **Production and quality control**

Record checks and deviations for the client's decision.

04 **Logistics coordination**

Compare transport options against the cargo and project constraints.

Working process

01 Project inputs

Product, specifications, quantity, timing and constraints.

02 Scope of work

Stages, criteria, responsibilities and agreed outputs.

03 Checkpoints

Confirmations and open questions before the next decision.

04 Next stage

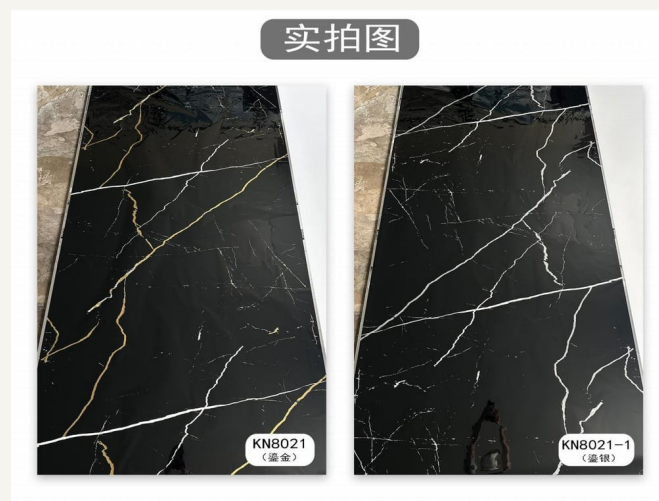

The client decides using the information gathered.

Project boundaries

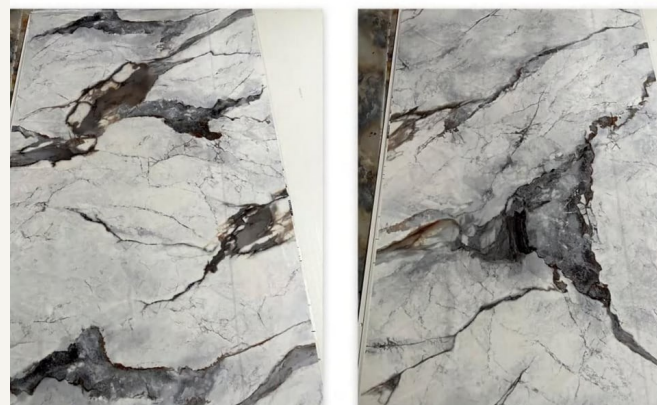

We agree the service scope before work starts.

Laboratory testing, legal and financial reviews require separate agreement.

8 mm SPC panels

Product catalogue images. They do not document manufacture or acceptance of a specific batch.

A US client required SPC panels with an 8 mm thickness.

RBW found a manufacturer and arranged production to meet the requested specification.

The public case does not disclose lead time, batch size, delivery or financial outcomes.

Hedonist x SURF

A manufacturer sourcing request based on the client's product concept.

The concept provides a starting point for defining product requirements and selection criteria.

Status: sourcing brief. This public material does not establish a completed manufacturing outcome.

Project preparation resources

Sourcing brief and supplier comparison

Verification scope and sample report structure

Non-standard specifications and responsibilities

Logistics brief and production checkpoints

Eight resources in Russian, with the sourcing brief and sample report also in English. CSV templates and printable pages.

Inputs for an initial discussion

- 01 Product and intended use
- 02 Required specifications and permitted tolerances
- 03 Indicative quantity and current project stage
- 04 Supply geography and preferred timing
- 05 Available documents, drawings or examples

If some inputs are still unknown, say so in your enquiry. We can discuss what needs clarification.

Let's discuss your project
